# DucoWall Solid

## Continuous Louvre Walls

DucoWall Solid continuous louvre walls can be fitted to an existing construction or be used as a wall ventilation system taking the place of the wall itself (non-load-bearing construction). They can be used as an intensive ventilation system or as a functional and architectural front system. The Solid range distinguishes itself due to the use of punched, 'stackable' blades. This ensures a robustness that has never been seen before of the continuous louvre wall in combination with a unique and tight design (Z-blade). In addition, the stackable block blade guarantees a fast and simple installation.

The installation of the DucoWall Solid continuous louvre system is fast and user-friendly through the tried and tested Direct Clip system where the aluminium blades are directly 'clicked' into place on the support profile. The blades can be provided with a standard small punching (P1) or with an additionally large punching (P2) that guarantees a free airflow up to 47%. DucoWall Solid is also available with an unpunched blade (100% burglar-resistant). DucoWall Solid is provided as standard in Natural F1 (15-20 µm) and is available in all RAL colours (60-80 µm) on request.
